N Engl J Med High throughput DNA sequence variant detection by conformation sensitive capillary electrophoresis and automated peak comparison.

Indeed, strong responses have been observed after neo-adjuvant or front-line

Destruction of full-length androgen receptor by wild-type SPOP, but not prostate-cancer-associated mutants. Allele loss on chromosome 1p36 in epithelial ovarian cancers. Activation of kinase-dependent signalling pathways The profound effect of AR axis inhibition on prostate cancer cells has ramifications for many kinase signalling pathways, particularly those that have accumulated genomic aberration during disease progression.

The precise nature and speed of AR reactivation is governed by existing andac

Predictors Participants had a mean age of
