It would certainly help if there were another instrument that policymakers could use—say foreign exchange FX market intervention official purchases and sales of dollars for local currency. Countries use foreign exchange reserves to intervene in foreign exchange markets to balance short-run fluctuations in exchange rates.

The market equilibrium exchange rate is the rate at which supply and demand will be equal. Unlike the gold standard, the central bank of the reserve country does not exchange gold for currency with the general public, only with other central banks.
