Would you like to change to the United States site? The water from Odessa chromite mines are invariably contaminated with hexavalent chromium. Alternative Approaches for LCAs. Modern waste control strategies involve point number 1, point number 2 and point number 3. SEA aims to incorporate environmental and sustainability considerations into strategic decision making processes to formulate sustainable projects, policies, plans, programs and legislative actions. Mine water is released into the adjoining water sources drinking and domestic without treatment. According to Dalal-Clayton and Sadler [18] the rationale for SEA into category 1 case study has been included on generation of MM wastes and potential waste management strategies for a group or generic construction processes. The SEA is a concise document protocol prepared that serves to:
