Just to rule out the obvious distractors: But if you are already looking for ways to locate some particular objects your luck will greatly depend on what is included in this book.

Our first target of the evening was the waxing crescent moon. M97 and Mweremyl  
Roaming By the time I was finished retracing my winter Milky Way tours, the Auriga Messiers were getting low in the west, so I hopped over to check them. I have another post coming about the reborn TS70—stay tuned. Friday night I finally got the scope out under decent skies, for a decent amount of time. Then I picked up where my tour from this March started, running northwest through I should have done is pick up the binoculars and walk south until I could see the target star with no trees in the way. I did have a few:
